- Types of Charter Schools
- Methods
- Days of Learning

Note

- Free/reduced lunch variable is used as a proxy for poverty in the analysis.
- In 2019-2020 the NJDOE expanded its collection of gender data to include non-binary and undesignated gender, but this study uses data from 2016-17 through 2018-19 school years that only contains binary male and female category as an option.

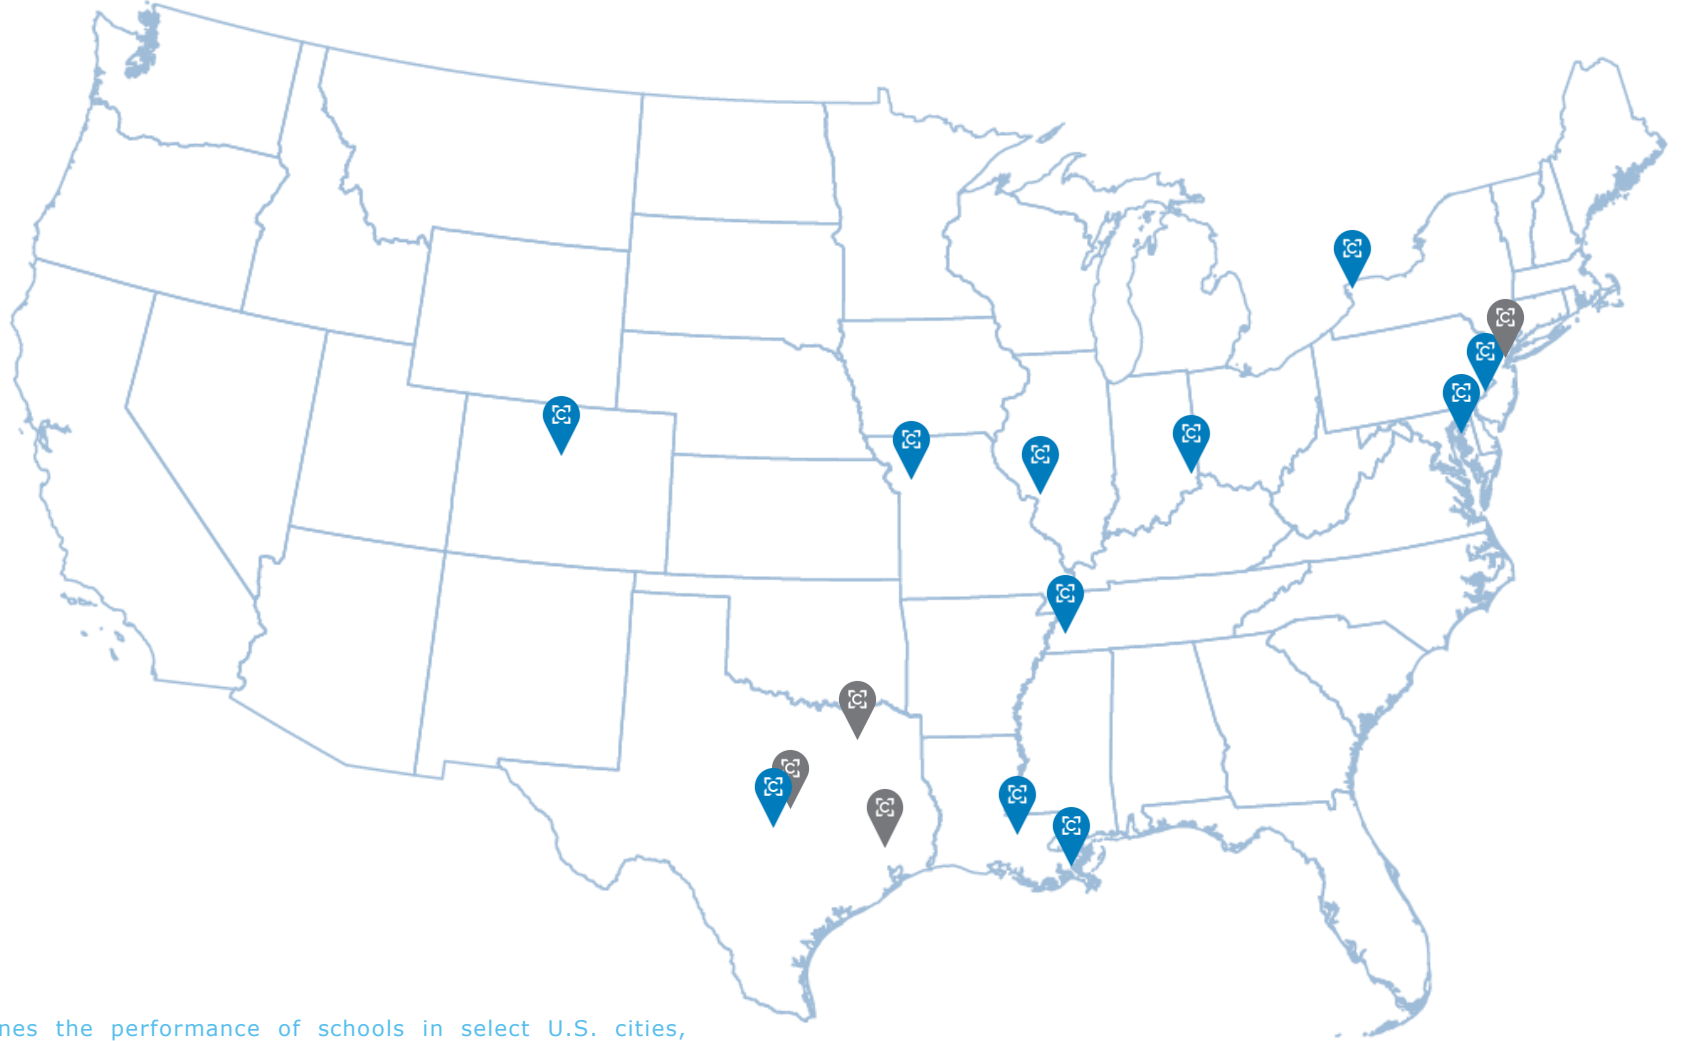

○ REPORT OVERVIEW

01

About The City Studies Project

The City Studies project examines the performance of schools in select U.S. cities, including Camden. We study the academic progress of students as the measure of school performance.

Cohort 1

Cohort 2

Sectors of Schools

COMMUNITIES MAY HAVE UP TO FOUR SECTORS OF SCHOOLS

CHARTER SCHOOLS

Public schools operated independently from the traditional school district, with autonomy in adapting school designs and held accountable for education results.

Charter Management Organizations (CMOs)

Organizations holding the charter and overseeing the operation of at least three charter schools.

Independent Charter Schools

Organizations holding the charter and overseeing the operation of a single or two charter schools.

RENAISSANCE SCHOOLS

State-mandated charter schools run by CMOs based on Urban Hope Act of 2012. Renaissance schools enroll students from local neighborhoods.

SELECTIVE MAGNET SCHOOLS

District-run schools that screen all the students with academic criteria.

OTHER DISTRICT-RUN SCHOOLS

Public schools not belonging to any of above types.

Research Question and Analyses

IN THIS REPORT WE EXAMINE ACADEMIC PERFORMANCE IN CAMDEN USING DATA FROM THE SCHOOL YEARS 2016-17 THROUGH 2018-19. THERE ARE THREE LEVELS OF ANALYSIS.

01

Overall performance in Camden schools over two years.

02

Performance for Renaissance schools, charter schools, magnet schools, and the rest of Camden public schools over two years

03

Performance in the 2018-2019 school year **by school type, race, poverty status, English language learner (ELL) status, special education status and gender.**

WE MAKE TWO SETS OF COMPARISONS.

- The performance of Camden students is benchmarked against the state average performance, accounting for student characteristics.
- The performance of Renaissance school students, performance of charter school students, performance of magnet school students within Camden are then compared to that of similar traditional public school (other district school) students within Camden.

○ Measure of Academic Performance

ACHIEVEMENT VS. GROWTH

Achievement scores capture what a student knows at a point in time. They are influenced by students' prior conditions in addition to schools' contributions.

Growth scores indicate how much progress a student makes from one year to the next. Growth scores allow us to zero in on the contributions of schools separately from other factors that affect point-in-time scores.

IN THIS STUDY WE MEASURE ACADEMIC PERFORMANCE AS HOW MUCH GROWTH STUDENTS MAKE FROM ONE YEAR TO THE NEXT

We analyze student growth in standard deviation units so that the results can be assessed for statistical differences.

In the following tables of findings, we transform growth from standard deviation units into days of learning based on a typical 180-day school year.

○ RESEARCH FINDINGS

○ Summary of Findings

The summary of the findings from the analysis of Camden schools is presented [here](#).

○ APPENDIXES

03

○ Acknowledgments

New Jersey Department of Education provided supports in the acquisition of student-level data.

Camden Education Fund assisted CREDO with verifying the list of public schools in Camden.

Types of Charter Schools

There are two types of charter schools.

CHARTER MANAGEMENT ORGANIZATIONS (CMOs)

Organizations holding the charter and overseeing the operation of at least three charter schools.

INDEPENDENT CHARTER SCHOOLS

Organization holding the charter and overseeing the operation of a single charter school. It may run the school directly or contract with an organization which provides services to one or two charter schools.

OUR ANALYSES OF CAMDEN CHARTER SCHOOLS INCLUDE A BREAKOUT OF CMOs AND INDEPENDENT CHARTERS.

- With more schools and students than a single charter school, CMOs have some operational advantages in their ability to spread administrative fixed costs, thus providing the possibility of greater efficiency. In addition, CMOs may be able to support additional programs and more robust staffing.
- Whether CMOs lead to better student outcomes is a matter of interest across the country.

○ Methods

The annual academic growth of students in Camden from 2016-17 to 2018-19, overall and by sector, is benchmarked to the state average growth, accounting for student characteristics.

We also explore how one-year growth of Camden students for the period ending in Spring 2019 differs by school type, race, poverty status, English language learner status, special education status, and gender.

Days of Learning

CREDO USES ADVANCED TECHNOLOGY AND SOPHISTICATED STATISTICAL TOOLS TO MEASURE STUDENTS, SCHOOLS AND THE EDUCATION LANDSCAPE.

While these tools create precise and reliable answers, they are presented in technical terms that are not user-friendly to a general audience. To translate the technical results into terms that are accessible to non-technical audiences, CREDO developed Days of Learning.

01

Think about the students in your state's public schools. For many of their years of schooling, they take achievement tests to measure what they know at the end of the school year. We can identify the average score for each test each year.

02

Imagine a student who scores exactly at the average in one year, say 4th grade, and then in the following year, scores exactly at the average again on the 5th-grade test. The amount of year-to-year learning for that student show us what the average learning is for all the students who took both tests.

03

We do that calculation for every grade the state tests: 4th to 5th, 5th to 6th, and so on.

04

CREDO uses those annual measures of average learning to represent a typical year of learning, and equates that to a typical 180-day school year. We say that the student in our example has gained 180 days of learning.

05

If a student makes more progress than the average student, we take the amount of extra achievement and translate it into 180-days of learning plus "X" extra days. We are creating a measure of student learning as if the student went to school for 180 days plus X days. The size of "X" depends on how much more the student learns than the average student — if it's a lot more, then "X" will be a large number, and if it's a small amount more, "X" will be a small number.

06

The same is true for students who do not learn as much as the average student. Instead of adding to the 180-days-of-learning average, we subtract from that base to reflect the smaller-than-average advances that those students realize. In these cases, the difference leads to numbers such a "165 days of learning" or "152 days of learning". Against the average standard of 180 days, these smaller days show that students learned as if they had only attended school for 180 days minus X days during the school year.
